The Enduring Beauty of the Steel Casement

Wide-swinging, slender and graceful of frame, but of rigid and sturdy construction, Truscon Standard Copper Steel Casements offer full opening for maximum ventilation and light. To the architectural charm of the casement window, is added the distinguishing simplicity and graceful, enduring beauty of Truscon design.

All-steel close fitting at head, sill and side jambs; provided with double contact weathering—Truscon Casements prevent annoying “rattle,” and securely seal the interior from draughts, rain and snow. Truscon craftsmanship has standardized these Casement windows of copper-steel to be of maximum service for all buildings—small or large.

Fireproof and indestructible, these rigid steel windows always keep in alignment; open easily and close tight; never stick or warp, or need repairs. Truscon Casement Windows are made of copper steel, the metal that resists corrosion. Its superiority has been proved by extensive tests conducted by leading authorities.

Truscon Casement Windows are made from solid, rolled steel sections. Vertical and horizontal muntin bars are united by means of a dove-tailed, interlocking joint of superior workmanship and finish. This feature of assembly, secured without distortion of members, and imparting great strength and permanent union, has contributed in large part to the popularity of Truscon windows with architects and builders.

—At the Low Price of Standardized Production

Truscon Standard Casements are designed and built to provide a high-quality product at low cost. Every manufacturing economy that can be effected through standardization and volume production, has brought this window down to a price within the reach of every home builder—actually lower than the cost of double-hung wood windows in ordinary use.

In making comparison with wooden windows, remember that Truscon Standard Casements come complete in frames with all hardware attached. No added expense for labor of fitting, weights, hardware and priming coat of paint. Another important economy is the elimination of need for interior wood trim along jambs and head.

Their durability and permanence; immunity from fire and impact hazards; high factor of safety from marauders; complete weather protection of interior wall decorations and window hangings,—are advantages of incomparable value in considering the upkeep cost of your initial investment.

Truscon Casement Windows are supplied in units of two sizes. Any number of these units can be combined to provide any desired amount of daylighting. A few typical combinations and details are shown on opposite page. In any type of wall construction—brick, stone, concrete, stucco or wood—Truscon Standard Casements are easily installed.

And Now—A Word For Your Basement

See the Extra Daylight You Get With Truscon Basement Windows

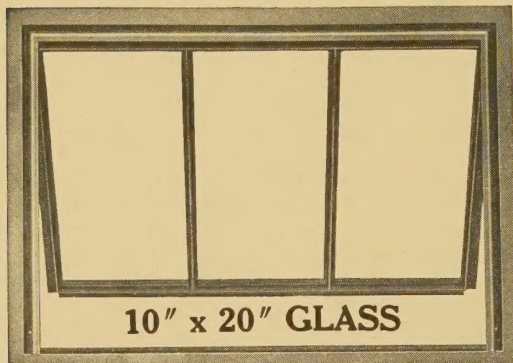

Compare the daylight area of the Truscon Copper Steel Basement Window, with a wood window in the same size opening, as shown in the accompanying illustration. By using Truscon Copper Steel Basement Windows you gain from 50% to 80% more daylight, depending on the size of window used.

10" x 12" GLASS

Width 2'-9 $\frac{3}{4}$ " Height 1'-3"

10" x 20" GLASS

Width 2'-9 $\frac{3}{4}$ " Height 1'-11"

Basements Should Be Cheerful, Bright and Secure, in Any Weather

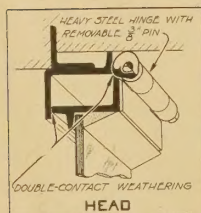

Basement windows must not only admit more daylight, but must keep out wind and rain. One of the exclusive features of Truscon Copper Steel Basement Windows is the continuous double overlapped weathering, that makes them weatherproof against the most driving storms.

Truscon Copper Steel Basement Windows do this and more. They never leak, stick nor need repairs. They are always easy to open and close and lock automatically.

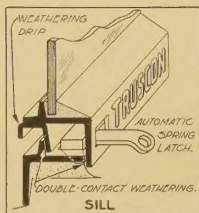

As an added feature, these popular Truscon Basement Windows are made of copper steel, the metal that resists corrosion. Its superiority has been proved by extensive tests conducted by leading authorities.

All this you get without increase of price; in fact Truscon Copper Steel Basement Windows ordinarily cost as little as wood; and on the basis of daylight area, cost a third less.
